At a glance

Visual UI	7.5 / 10	Clean, modern, but text-heavy
Content	8 / 10	Strong copy, a few inconsistencies
UX / Navigation	6.5 / 10	Clear structure, mobile nav missing
Mobile responsive	5.5 / 10	Layout adapts; nav + footer bugs

Executive Summary

The IRP 2.0 landing page reads as a confident, well-structured product page: a clear value proposition, a three-tier program model that scaffolds naturally from "Hustler" to "Infinite Aura," and an FAQ block that anticipates the questions a first- or second-year student would ask. Copy is overall strong and audience-aware. Where the page leaves real value on the table is in three areas: (1) the hero feels visually thin and pushes content below the fold, (2) the mobile experience drops the primary navigation entirely with no hamburger replacement, and (3) several small but visible bugs and inconsistencies in the content (date formats, question counts, an invisible footer logo) erode the otherwise polished feel.

The recommendations that follow are grouped by the four focus areas you asked for and ordered within each group by impact. Each finding is paired with a concrete suggestion and, where it helps, a "before / after" mockup that shows the change in visual terms rather than just describing it. None of the suggestions require a redesign - most are scoped to one component at a time.

Top five things to fix first

#	Fix	Why it matters	Effort
1	Add a mobile hamburger menu	Users on phones cannot reach About / Levels / Courses / Checklists / FAQ.	Low
2	Use a white logo variant in the footer	Current logo is invisible on the dark navy footer.	Trivial
3	Tighten the hero top padding and add a hero alt	Hero is pushed below the fold and feels empty on the right half.	Low
4	Fix "MCQ - 1.5 hrs - 4 Qs" question counts	Looks like a typo - 1.5 hours for 4 MCQs erodes credibility.	Trivial
5	Balance the Level 3 card with the L1 / L2 cards	Level 3 card currently looks half-empty; add mentor logos and a clear CTA	Low

1. Visual UI Design

The visual language is recognisably modern: rounded cards, an indigo / blue primary, a purple accent reserved for the elite Level 3 track, and soft surface tints. The typography hierarchy between H1 and body is clear. The page is consistent, but it relies very heavily on text blocks and pale backgrounds - there is almost no imagery, no iconography beyond a few emojis, and no logos / faces / numbers / illustrations to break up the reading rhythm.

1.1 The hero feels empty and falls below the fold

Current: centered single-column hero, large empty gutter at top, no supporting visual.

SUGGESTION

On a 1440-wide display the hero text starts roughly 150 pixels below the navigation. The combination of top padding and a centered single-column block means the right half of the screen is empty whitespace and the CTAs end up close to the fold line.

Suggested: two-column hero, trust strip with mentor brand names, ladder illustration on the right.

Switching to a two-column hero keeps the existing copy but introduces a visual on the right (a "path / levels" illustration is the most obvious fit since the program is literally a path). A trust strip under the subhead - "Backed by mentors from Microsoft, Apple, Google, Salesforce" - pulls the credibility currently buried in the Level 3 card up to the fold where it does the most work.

1.2 The "Three Levels" cards are visually unbalanced

Current: Level 3 card has noticeably less content than Levels 1 and 2.

SUGGESTION	Level 3 ("Infinite Aura") currently shows three benefit lines while L1 and L2 each show ten or more content rows. Side-by-side the L3 card reads as half-finished, which is the opposite of the intended "premium, exclusive" framing.
-------------------	--

Suggested: equal heights, mentor brand chips in L3, and a parallel CTA at the bottom of every card.

Three changes do most of the work: (a) lock all three cards to the same height so the column feels deliberate, (b) replace the plain bullet list in L3 with a row of mentor-brand chips (Microsoft / Apple / Google / Salesforce) - the same companies you already mention - and (c) give L3 a footer link parallel to L1 and L2 (e.g. "-> Apply for Infinite Aura") so the call pattern at the bottom of each card matches.

1.3 Iconography is inconsistent

SUGGESTION

The "Before 14th June" checklist uses raw emoji glyphs (book, laptop, check, document) inside otherwise polished cards. Emojis render differently across operating systems and break the visual rhythm against the rest of the page, which uses outline iconography (the check circles, the trophy in L3, the people-icon for post-assessment).

Pick one icon system - Lucide, Heroicons, or Phosphor - and standardise on it. Each of those libraries has equivalents for the four checklist items: book, terminal, check-circle, document. Same colour, same stroke weight as the rest of the page.

1.4 Palette and type are working - keep them

Observed palette - already balanced. Purple is reserved for L3 / premium states.

STRENGTH

The blue / indigo plus purple-for-premium combination is doing real semantic work - purple reliably signals "Infinite Aura tier" across the page. Keep it. The only addition worth considering is a green success token (which you already have implicitly in checklist ticks) so confirmation and "level cleared" states have a distinct colour.

2. Content Review

The copy is the strongest part of the page. The audience framing ("1st and 2nd year students, YOG 2028 and 2029") is repeated at every decision point, the level names borrow Gen-Z vocabulary ("The Hustler / The Main Character / Infinite Aura") in a way that lands without feeling forced, and the FAQ block is unusually thorough. The issues below are individually small, but they are the kind of detail that students will notice when they are about to commit to an assessment date.

2.1 "Guaranteed internship opportunities" is risky framing

Current hero subhead:

*"Built exclusively for 1st & 2nd Year Students (YOG 2028 & 2029). Launch your career with **guaranteed internship opportunities**."*

ISSUE	The word "guaranteed" overpromises against the actual program structure. The FAQ clarifies that internships only unlock after clearing both L1 and L2, and the stipend tier requires L3 - so the opportunities are conditional on performance, not guaranteed. Beyond brand honesty, "guaranteed" language is the kind of phrasing that draws legal and compliance attention in India's ed-tech space.
-------	--

Suggested rewrite: "Built for 1st & 2nd year students (YOG 2028 & 2029). Earn your first stipend internship - fully online, fully merit-based." Or: "...with internship opportunities unlocked at every level." Either keeps the urgency without the legal weight.

2.2 Inconsistent date formats

Same date appears three different ways on a single page:

*"First Assessment: **14th June 2026**" (hero badge)*
*"**14 Jun '26**" (Level 1 card)*
*"**Before 14th June** - Check These Off" (checklist heading)*
*"**June 14th** assessment" (FAQ body)*

SUGGESTION	Pick one canonical format ("14 June 2026" is the most internationally readable) and use it in every reference. The abbreviated "14 Jun '26" inside the level card especially looks out of place next to the formal language elsewhere.
------------	--

2.3 Likely typo in Level 1 question count

In the Level 1 card: "Python + DSA - MCQ - 1.5 hrs - **4 Qs**". The Frontend section in the same card lists "30 mins - 30 Qs" (1 minute / question) which seems right. Python + DSA at 1.5 hours for only 4 questions is implausible - likely meant **40 Qs** or **4 sections**.

ISSUE	Double-check the assessment spec with the academic team - a wrong question count is the kind of detail students screenshot and circulate. Same care for the Level 2 cards which all read "20 mins - 20 Qs" - confirm whether those three sections run sequentially (60 minutes total) or in parallel.
-------	---

2.4 Course names mix imperative and descriptive voices

The L1 Frontend Track lists, in order: *Build your own Static Website*, *Build your own Responsive Website*, **Modern Responsive Web Design**, *Build your own Dynamic Web App*, **JS Essentials**, **Introduction to React JS**. The first, second, and fourth use the imperative "Build your own..." voice; the third and last switch to descriptive. The list reads less professional than it could because the rhythm changes.

SUGGESTION

If the course names are pulled live from the NxtWave course catalogue this is a catalogue issue, not a page issue - but the page is the place where the inconsistency shows. Either rename the odd ones out, or display all of them with the catalogue verbatim and remove the "Build your own..." framing entirely.

2.5 Bare bit.ly link inside a polished card

Step 1 of the Eligibility and Registration block surfaces a bare link: **bit.ly/Internship-registration**. Inside an otherwise polished, well-styled card a shortener URL looks like it was pasted in a hurry. The form right below already collects the same data - so either the shortener is doing something different (deep-link to a CRM?) or it is redundant.

SUGGESTION

Replace the visible bit.ly with a styled "Open registration form" link button that points to the canonical URL behind it. If the form below this section is the same form, drop the shortener step entirely.

2.6 Strengths worth keeping

STRENGTH

The "Before / Now" comparison block is genuinely effective at communicating what changed. The FAQ is organised into named topic groups ("Eligibility", "Assessment", "Skills", "Projects", "Stipend", "Registration", "Where opportunities appear", "Courses") - that grouping is rare and good. The "Last Updated: May 2026" line at the bottom is a small trust signal that you should keep refreshing in place.

Before

The old IRP

- X** Assessed alongside 3rd, 4th & final-year
- X** Common assessments regardless of year
- X** Online + Offline rounds (travel required)
- X** One-size-fits-all process

Now

IRP 2.0

- OK** Tailored assessments - only what you have studied
- OK** Year-level appropriate content
- OK** 100% Online - attempt from anywhere
- OK** Multi-level structure with progressive unlocks

Optional polish: pair the Before card with red X marks and the Now card with green OK marks. Same content, faster to scan.

3. UX and Navigation

3.1 The "View the Path" CTA has no clear destination

The hero offers two CTAs: **Register for IRP 2.0** (clear) and **View the Path** (unclear). "The Path" could plausibly mean the three levels, the learning courses, or the eligibility flow. There is no anchor target indicated visually.

SUGGESTION

Make the link explicit either by anchor (View the Path -> #levels) and by relabelling: "See the 3 levels", "How it works", or "View learning path". Add a small chevron icon so users register it as a navigation action.

3.2 The Level 3 card breaks the card-CTA pattern

L1 ends in "Unlocks Eligibility for Level 2", L2 ends in "Unlocks Internships (Rs.5K-Rs.10K)" - both presented as trophy-iconed, link-styled bottom rows. L3 has no equivalent. The pattern breaks visually and functionally - users have nowhere to go from "Infinite Aura" except scrolling.

SUGGESTION

Add a bottom CTA row to L3 - "-> See Infinite Aura eligibility" anchored to the relevant FAQ, or "-> Talk to a Success Coach" anchored to the footer support link. Pick one, but the slot should not be empty.

3.3 The eligibility form is missing trust signals

The Internship Profile Registration form collects Full Name, YOG, Email, Phone, Level, and a binary NOC question. There is no consent / privacy notice, no terms acknowledgement, and no inline validation hint.

SUGGESTION

Add: (a) a "We will only use this to contact you about IRP 2.0" microcopy line under the form, (b) a privacy / terms link near the submit button, (c) inline format hints under the phone and email fields. None of these slow the form down - they remove hesitation, which improves completion.

3.4 FAQs are well-organised but answers are collapsed by default

The FAQ block groups questions thoughtfully (Eligibility, Assessment, Skills, Projects, Stipend, Registration, Where opportunities appear, Courses and Platform) but every accordion is closed on load. The first two questions in each group are the highest-traffic ones - auto-expanding them on first paint would let students scan answers without clicking each row.

SUGGESTION

Open the first question of each group on initial load. Keep the rest collapsed. Add a small "Expand all" / "Collapse all" link above the FAQ list for users in research mode.

3.5 The sticky nav is doing its job

STRENGTH

Keeping About / Levels / Courses / Checklist / FAQ on the right and the Register Now CTA persistent at the top right means the primary action is always one click away. Do not change this on desktop.

4. Mobile Responsiveness

Tested at narrow widths down to ~530 px. The page does respond - the level cards stack, the hero CTAs stack, the form fields stack, type sizes scale - but two issues stand out as critical and one as a polish item.

4.1 The mobile navigation menu is missing entirely

Current narrow-width header: only logo + Register Now. About / Levels / Courses / Checklist / FAQ disappear.

ISSUE

Below the desktop breakpoint, the primary nav links collapse and are replaced by - nothing. There is no hamburger icon, no drawer, no skip-link. The footer happens to repeat the same links so a mobile user can still get there by scrolling all the way down, but the standard pattern is broken.

Suggested: add a hamburger to the right of Register Now; open it into a full-width drawer with the five links + a footer CTA.

Standard fix: add a hamburger button to the right of Register Now (or to the left of the logo, either is fine), and on tap open a full-width drawer that contains the same five links, the Register Now CTA repeated near the bottom, and the "Reach your Success Coach" link from the footer. Close it on link-tap and on outside-tap.

4.2 The footer logo is invisible on mobile (and on desktop)

Current: dark-navy footer + dark-on-light logo = invisible mark. Worse on mobile because the footer takes more screen.

ISSUE

The footer uses a dark navy background (around #0B1220) but the logo asset is the same dark-on-light variant used in the top nav. On the footer it renders as effectively blank.

Suggested: ship the inverted (white) logo variant for dark backgrounds and serve it conditionally.

Two-line CSS fix: either swap the `<img src>` to a white-on-transparent SVG variant, or apply `filter: invert(1) brightness(1.2);` as a quick patch. The brand team almost certainly has a dark-mode lockup already.

4.3 Tap-target spacing in the form needs a small bump

SUGGESTION

At narrow widths the form fields visually stack but the spacing between the YOG dropdown, Email field, and Phone field gets tight enough that on small phones it is easy to focus the wrong field. Bump vertical spacing between fields from ~12 px to 16-18 px on viewports below 500 px and increase tap-target height to a minimum of 44 px (iOS HIG / Material guideline).

4.4 Card stacking is well-handled

STRENGTH

The three Level cards, the Before / Now comparison, the four checklist tiles, and the two-up "Complete Registration" + "Watch your email" callouts all stack cleanly without horizontal scroll. That is the hard part of responsive design and it is done correctly here.

Implementation checklist

A version of this list pasted into your tracker:

Priority	Item
Critical	Add mobile hamburger menu with drawer containing all five nav links + Register CTA.
Critical	Ship inverted (white) logo variant for the dark footer.
Critical	Verify and correct "MCQ - 1.5 hrs - 4 Qs" in the Level 1 card.
High	Replace "guaranteed internship opportunities" in the hero with conditional language.
High	Tighten hero top padding; add a right-side illustration or two-column layout.
High	Standardise the date format to "14 June 2026" everywhere.
High	Add a bottom CTA row to the Level 3 card so the card-CTA pattern is consistent.
Medium	Add mentor brand chips (Microsoft / Apple / Google / Salesforce) to L3.
Medium	Replace emoji icons in the checklist with the same icon library as the rest of the page.
Medium	Replace bit.ly link in the registration step with a styled link or button.
Medium	Open the first FAQ in each group by default; add Expand all / Collapse all.
Medium	Add privacy microcopy + terms link near the form submit button.
Low	Increase vertical spacing between form fields and tap-target height on mobile.
Low	Consider X / OK icons in the Before / Now comparison block for faster scanning.
Low	Audit course-name voice consistency with the NxtWave course catalogue.

If you want a second pass, the highest-leverage thing to do next is to convert the hero and the Level 3 card into the two-column / mentor-chip versions sketched in this report and rerun the review with screenshots of the live update. Those two changes alone shift the page from "well-organised information" to "convincing landing page" - everything else compounds after that.

Review prepared by reviewing the live page at [attached-assets-1-product60.replit.app](#) on 14 May 2026 at desktop (1440 px) and mobile-emulated (~530 px) widths. Findings reflect the page state on the date of review and may not match later iterations.
